Environmental Management Report

Environmental Management Report HSF 25-09-2021 Revision: 3

Date: 25/09/2021

1.0 INTRODUCTION

1.1 Overview

Amp Energy has assigned to GRS the design, engineering, procurement, fabrication, construction, installation, commissioning, testing, delivery and rectification of all defects, to the completion of the Hillston Sun Farm and associated works.

An element of this work is the satisfaction of the project's Environmental Management Strategy (EMS) dated 31 August 2018.

The EMS sets out monitoring and reporting requirements in the areas of biodiversity and landscaping and these topics are dealt with in this report.

Environmental Management Report

Environmental Management Report HSF 25-09-2021 Revision: 3

Date: 25/09/2021

2.0 BIODIVERSITY

2.1 Overview

Biodiversity monitoring and inspection requirements of the project are set out in Table 4.1 of the EMS, and these requirements are responded to below.

2.2 Requirement 4.1.1 – Visual inspection of vegetation clearance activities

No clearing of vegetation, within the project footprint has been required by project construction activities so this requirement has not been triggered.

2.3 Requirement 4.1.2 – Maintain a log of salvaged animals and actions taken to relocate them

A register of animals salvaged was created and it has been maintained throughout the construction of the project, refer Appendix I - "REG-8.13.1-A1-Project Animal Salvage Register.xls", photographs.

At present, only one animal has been salvaged, a native parrot, *Barnardius zonarius* "Australian Ringneck Parrot" on 13 July 2021.

Further details:

The parrot was initially identified beneath a vehicle in the GRS carpark. The vehicle was slowly driven forward, and a cardboard box was placed over the parrot then a stiff piece of cardboard was slid under the box to collect the parrot. The parrot was driven to the fenced treed area within the project footprint, via the northern gate. Once inside, the box was placed on the ground, photographed, then opened and the bird was photographed in the box. The box was gently tipped on its side and the GRS personnel backed away slowly, the bird flew out of the box and into the treed area.

The parrot seemed alert and in good condition, and we considered it to perhaps have been stunned. The option of taking the parrot to Griffith to a vet was considered and decided against due to the distance between us and the vet, instead we relocated it to the treed area. We did not contact a wildlife service regarding this incident as the bird flew away once the box was opened.

Spoke to WIRES on Friday 17th of September reference No. 1545325 re: the Native Bird Incident that we had put in the Environment report sent to AMP dated Tuesday, 14 September 2021, WIRES had informed GRS that we had done the right thing in not taken the bird to a vet due to the distance between Hillston & Griffith would have stressed the bird out & that we had released it close to where we had found it.

For future reference WIRES suggested that we phone them & they will determine from some simple questions asked whether or not they will send a volunteer rescue wildlife officer to your location or not.

Environmental Management Report

Environmental Management Report HSF 25-09-2021 Revision: 3

Date: 25/09/2021

2.4 Requirement 4.1.3 – Inspections for fauna where footings have been left open overnight

In conjunction with Amp Energy's Construction Manager for the project, Justin Webb, GRS registered a Hazard Observation (HAZOB) in regard to the risks that arise from open footings, to both fauna and workers alike refer Appendix II - HAZOB #026 - 20 April 2021. In line with hierarchy of control principles, a control that eliminated the risk was preferred and this was implemented on 04 May 2021 for the remainder of the project. Specifically, the footings were blocked to prevent fauna and workers alike from being able to enter. See Appendix III – PCAR #075 – Evidence of close out.

2.5 Requirement 4.1.4 – Inspections of stockpiles and storage areas to ensure no impact outside development site

GRS have positioned stockpiles and storage areas within the project footprint such that the biodiversity-based impacts outside the development site are minimised. A physical barrier has also been installed to eliminate biodiversity impact outside the development site. Monthly inspections have been undertaken to verify effectiveness of the approach, refer Appendix IV – Stockpile and Storage Area Impact Verification Table.

Environmental Management Report

Environmental Management Report HSF 25-09-2021 Revision: 3

Date: 25/09/2021

2.6 Requirement 4.1.5 – Inspections to detect weed germination and signs of soil pathogen infection

Where there is a risk of weeds being brought onto the site in the tracks, tyres or implements of powered mobile plant, specifically with respect to earth moving equipment, GRS request evidence that the item of plant is free from weed bearing material, see Appendix V – Weed Declaration Example - SKIDSTEER 76896D.

Where weed germination and growth is from endemic species, particularly *Malva parviflora* "Marshmallow weed" GRS have avoided use of herbicides with their attendant biodiversity related risks and have controlled growth by physical methods, primarily slashing and mowing, see Appendix VI – Slashing schedule, photographs.

Environmental Management Report

Environmental Management Report HSF 25-09-2021 Revision: 3

Date: 25/09/2021

3.0 LANDSCAPING

3.1 Overview

Landscaping activities for the project are limited to two locations; specifically landscaping screening at the south eastern fence line, to the south of the "Remnant vegetation and overland flow path to be avoided" and adjacent to Kidman Way, as shown on Figure 1.1 of the EMS, and landscaping screening to be provided with reference to sensitive receiver R17 as identified on Figure 1.1 of the EMS.

3.2 Landscaping screening at the south eastern fence line area

Construction over the southern portion of the site has not yet commenced, and therefore nor has that section of landscaping

3.3 Landscaping screening for sensitive receiver R17

Landscaping in this area is currently subject to final design, with evidence of this provided in Appendix VIII – Amp Energy - GRS email thread regarding R17 landscaping. Monitoring requirements are therefore not triggered for this landscaping area.

Hi David,

We are getting closer with finalising this. The landscaper has come back to us with a proposal and some pricing, she has just one more to finalise. Once I receive this, we can close it out, ideally by end of this week.

Regards Justin

Justin Webb
